100bp DNA Ladder

Description 100bp DNA Ladder is ideal for determining the size of double-stranded DNA from 100 to 1,000 base pairs. The ladder consists of 10 fragments that range in size from 100-1,000bp in 100bp increments. The 500bp fragment is present at increased intensity to allow easy identification. All fragments are blunt-ended.

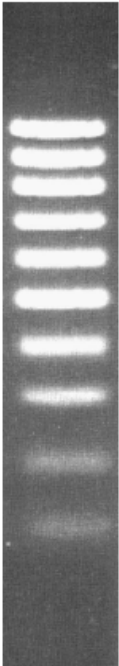

Fragments sizes(base pairs) 1000, 900, 800, 700, 600, 500 x 2, 400, 300, 200, 100 x 2 .

Concentration 0,2 mg/ml

Storage Buffer 10mM Tris-HCl (pH 7.8), 10mM NaCl, 1mM EDTA

Storage Store at -20°C

Loading The recommended amount of size marker to load on an agarose gel is 1µg/lane.
